Driver may cause a kernel crash with error messages "soft lockup" with specified network interface card.</li> <li>5. The command stty may output error if there is no loopback connector on NPort in Redundant mode.</li> <li>6. Network reconnection problems when using redundant mode.</li> <li>7. The Real TTY service may not be started automatically in Debian 6.0 or later versions.</li> <li>8. There may be communication loss when using IPV6.</li> <li>9. It can't read data due to abnormal flow control in Linux kernel 3.8 and later.</li> <li>10. When security mode is enabled, driver may crash if it connects to offline NPort.</li> <li>11. Port mapping incorrectly after reboot in Kernel 3.2.48.</li> <li>12. When NPort is offline, the current serial parameters are not saved for reconnection.</li> <li>13. While executing mxsetsec, the configuration of driver will be cleared.</li> <li>14. When opening node /dev/ttyr10, the port 16 should be opened, but the port 10 is opened instead.</li> <li>15. The driver reference count becomes negative after port open fail.</li> </ol> <p><b>Changes:</b></p> <ol style="list-style-type: none"> <li>1. Not support kernel 2.x.</li> <li>2. Log file increased unlimitedly causes file system crash.</li> </ol>	N/A
