

BST-1000 Series

Industrial Cellular Signal Boosters

Features and Benefits

- Stabilizes and improves low-power 5G signal environment
- Easy integration with Moxa 5G user equipment
- Compact size for easy installation
- -40 to 70°C wide-temperature design

Introduction

The 5G NR (New Radio) Tx and Rx booster is a cellular radio front-end accessory designed to cope with the challenges associated with signal attenuation, interference, coverage, and field site deployment signal cable loss limitations. The booster uses the advanced technology that enhances the performance and coverage of cellular 5G networks from 5G UE (user equipment). It operates by amplifying and extending the transmitting capabilities of the 5G UE. The signal quality and network capacity of the 5G UE will be improved significantly. In addition, this booster accessory enhances user experience and offers greater efficiency in 5G network communication.

Specifications

Cellular Interface

Cellular Antenna Connectors	BST-1110-T models: 3 x SMA (female) BST-1220-T models: 5 x SMA (female)
Frequency Bands Supported	BST-1110-T models: n48, n78 BST-1220-T models: n79
